WHAT IT DOES

One platform for any special situation: AI agents that read, structure, test, and ask a human

THE PROBLEM

A company hits a special situation: it needs new money, plans a merger, is in trouble, wants to refinance, or is changing hands. Each one needs the same hard work. Read the agreements, find the limits, design options, test the risk, and get a senior person to approve. Today this work is slow and manual.

WHAT STOCHASTIC IS

Stochastic is one platform for all of them. A situation profile tells the same team of agents what to look for, what to weigh, and when to ask. It works one deal from the first document to the final approval and asks a human whenever it is unsure. Code does all the deal math, so the numbers can be checked.

1 READ

Turn the uploaded documents into facts. Each fact keeps its page and quote.

INTAKE AGENT

2 FIND LIMITS

Find the clauses that limit new debt, dividends, and sales. Quote them exactly.

CLAUSE READER

3 DESIGN

Build options inside the limits, such as mixes of senior debt, junior debt, and preferred equity.

STRUCTURING

4 TEST RISK

Run thousands of seeded scenarios. Report the odds of a breach or a loss.

RISK AGENT

5 GET APPROVAL

Write the recommendation. A senior human approves, rejects, or asks for changes.

MEMO AGENT · HUMAN

YOU GIVE IT

- The loan agreement and its amendments
- Financial statements
- A term sheet or an offer
- One line: amount, purpose, hard limits

YOU GET BACK

- Ranked plans in one side-by-side table
- A memo where each claim cites a page and quote
- The clause that blocks a plan, and the route to consent
- An audit log of every step and every denied action

THREE RULES THAT BUILD TRUST

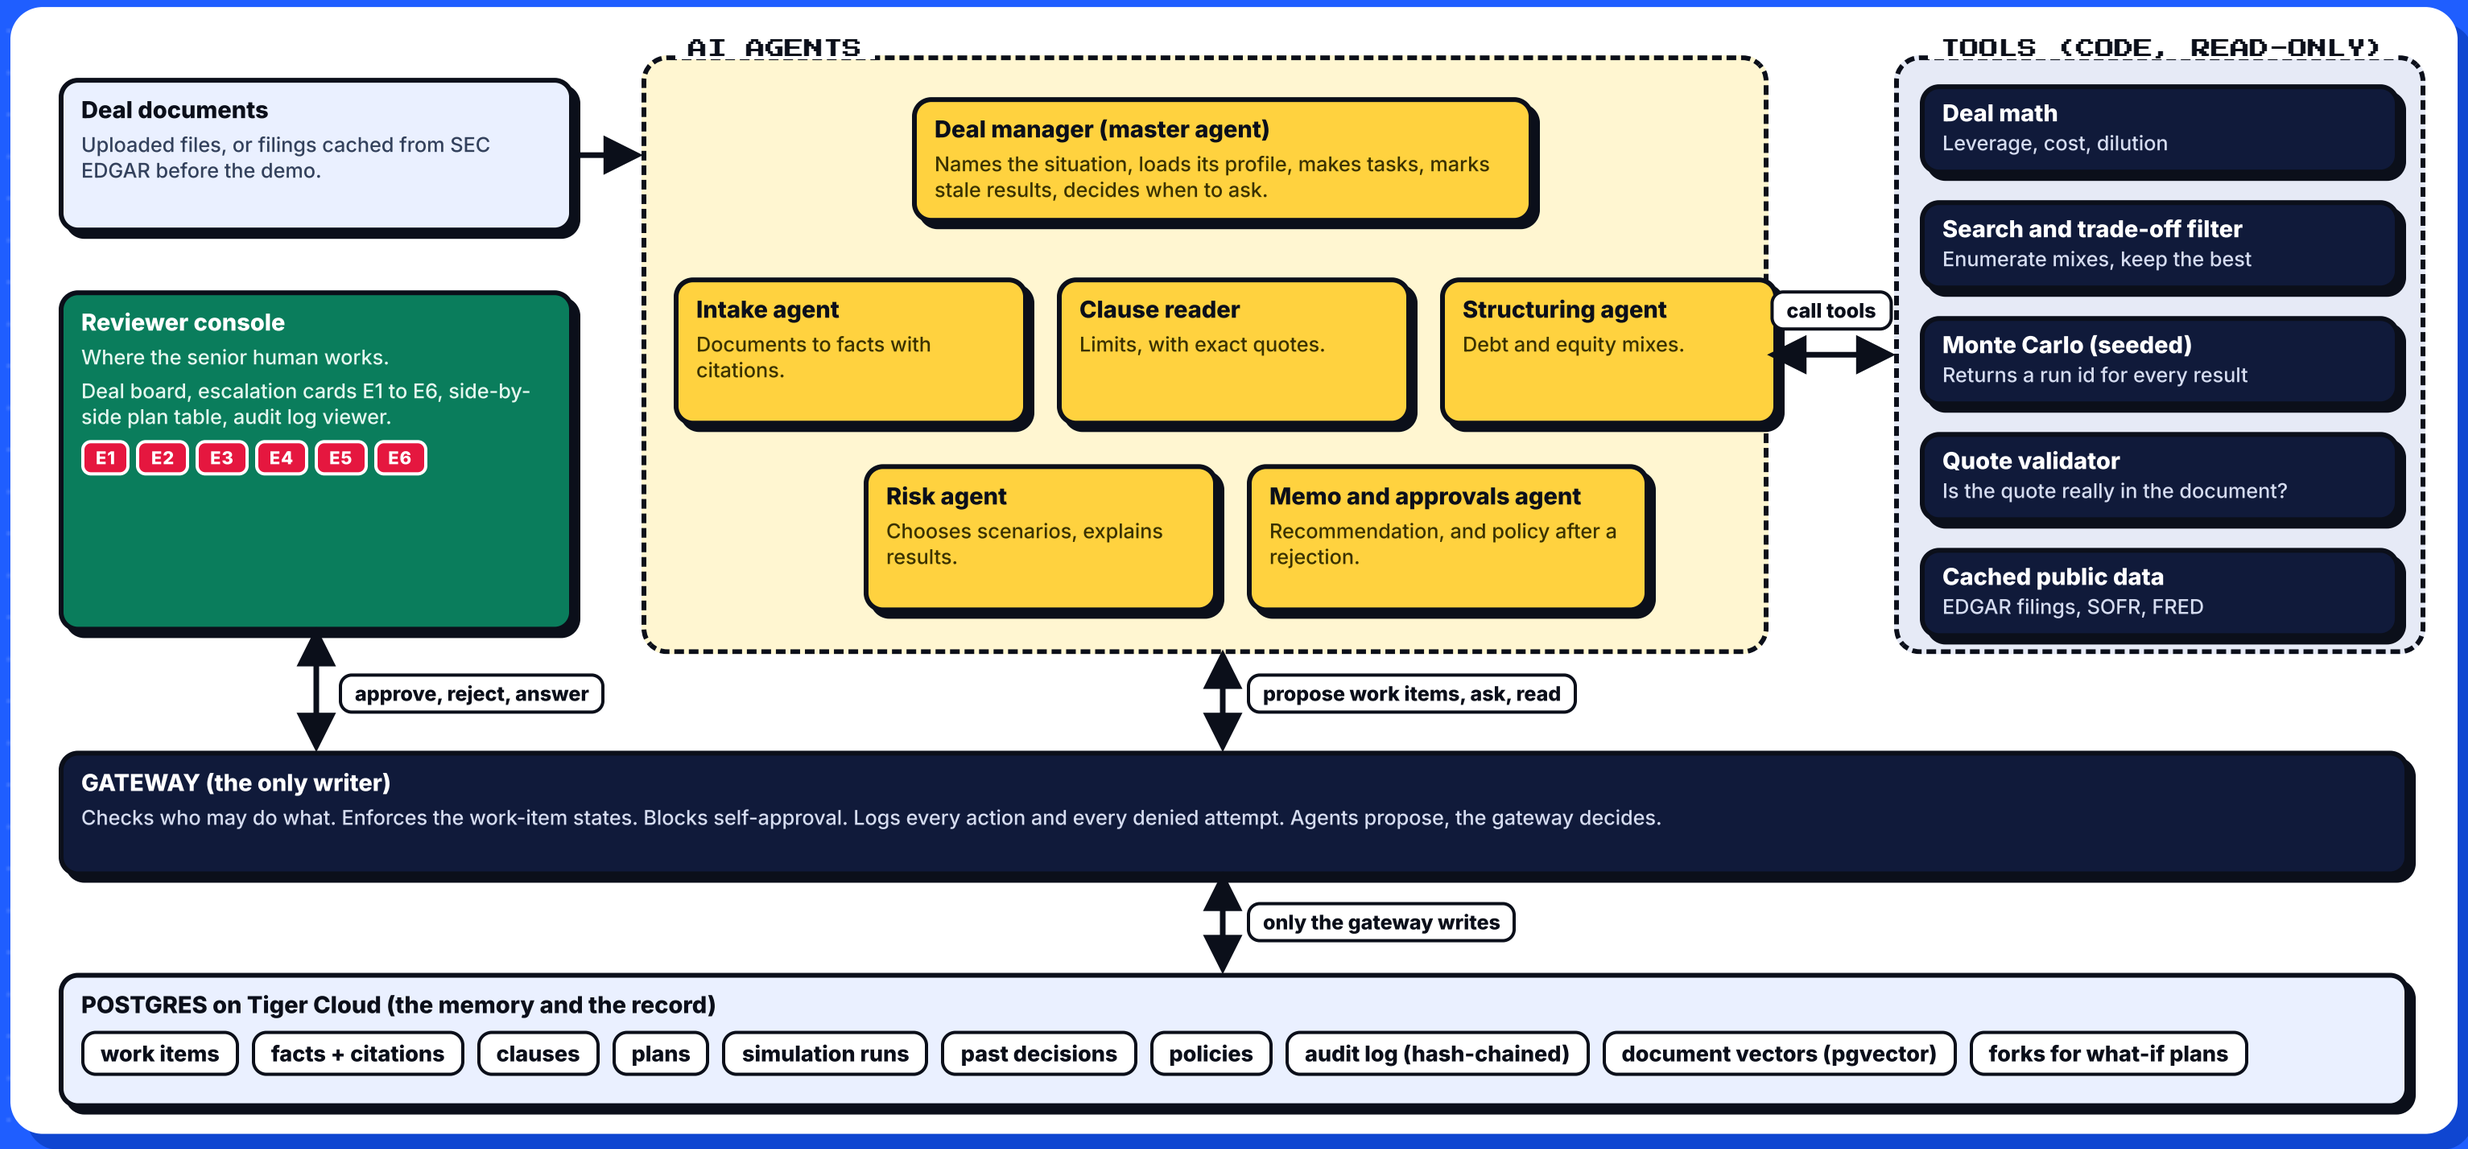

- **Code does the math.** Models read and write. They never produce a number.
- **Only the gateway writes.** An agent cannot change a record or approve its own work.
- **Unsure means ask.** The agent stops and asks the human reviewer.

Proof: we run the platform live on one real public deal. The same engine takes a different profile for each situation (next pages).

ARCHITECTURE

Four parts: people, AI agents with their tools, one gateway, one database

AI agent · Code (no AI) · Human reviewer · Escalation point · Data

ONE PLATFORM, EIGHT SITUATIONS

One engine serves all eight situations. The profile changes what the agents look for, weigh, and ask. The demo runs one

A PROFILE SETS Scope · Information needed · Instruments allowed · What to weigh · When to ask

The deal manager picks the profile. The reviewer can override it.

SITUATION	THE GOAL	LIMITS CHECKED FIRST	HEADLINE MEASURES	THE DEMO
Raising money	New capital at the lowest cost and dilution	Debt baskets, restricted payments, liens	Cost, ownership given up, covenant headroom	LIVE IN THE DEMO
Company in trouble	Buy time and avoid default	Covenant breach, cross-default, waiver terms	Cash runway, odds of default, recovery	IN THE PLATFORM
Refinancing	Replace existing debt on better terms	Prepayment premiums, call protection, maturity	Savings after fees, maturity wall	IN THE PLATFORM
Mergers and acquisitions	Fund or structure a deal	Acquisition baskets, lender consent	Leverage after the deal, funding certainty	IN THE PLATFORM
Selling part of a company	Raise cash from an asset sale	Asset-sale limits, required prepayment, lien release	Net proceeds, leverage after the sale	IN THE PLATFORM
Borrowing against assets	Secured loan on receivables or equipment	Lien limits, borrowing base, advance rates	Availability, cost	IN THE PLATFORM
Ownership changes	Buyout, recap, or new owners	Change of control, consent rights	Control shift, leverage	IN THE PLATFORM
Bankruptcy	Spot it early and hand it to experts	Default triggers, filing risk signs	Not modeled	HAND TO A HUMAN

The platform is designed for all eight situations. The weekend demo runs one (raising money). Default settings are inferred from public sources. No practitioner has checked them, so the reviewer can change every one. Bankruptcy handling is proposed, not confirmed.
